

DSSP515 Walk Through Metal Detector

FEATURES

Sensitivity of detection:

The highest sensitivity detected a one RMB coin in the middle of the door, which would not be misreported or misreported. It could detect precious metals such as copper, aluminum and zinc above 150 grams, or controlled knives and guns, excluding the influence of belt buckles, leather shoes and bras.

Anti-interference design:

According to the surrounding environment, the starting frequency is automatically set to avoid interference, and when multiple doors work side by side, they are close to each other, which have no significant impact on the detection performance.

Frequency set:

11 kinds of frequencies can be set automatically, and different tones can be set at different frequencies. Frequency can also be set manually.

Sensitivity adjustable:

Sensitivity can be adjusted as needed, a total of 100 sensitivity.

Passenger count:

Bilateral contraption infrared can accurately detect the number of people passing through and alarm number.

Four sides alarm bars:

Two sides of the door body are equipped with LED lights, which can visually display the area where prohibited items are located by positioning lights.

Sound-light alarm:

9 types of alarm sound can be selected, each of which has an 8-level adjustable tone and an adjustable alarm time.

Panel design:

LED display, Chinese and English panel switch.

Shockproof design:

The world's original seismic design, in the wind or artificial shaking under the false alarm.

One key set:

The built-in smart chip can store the set value of detection sensitivity recommended by a variety of places, making it convenient for users to choose quickly.

Frame materiel:

PVC appearance, and imported brand material is completely the same, beautiful, generous, fire, corrosion, moisture and anti - collision, deformation.

Remote control:

Use the remote control to set the parameters. The parameters can be password protected, which can't be operated by unauthorized personnel.

Network management:

Reserved communication interface, can be connected with computer, camera, three rollers, monitoring, statistical detection, adjust the security gate parameters.

Safety protection:

Comply with international safety standards, it is harmless to heart pacemaker wearers, pregnant women, magnetic media, etc.

DIMENSIONS

SPECIFICATIONS

Model No.	DSSP515
Brand	Daosafe
Framework Material	High-pressure Laminate (HPL)
Outer Dimension	2210(H)×840(W)×475(D) mm
Inner Dimension	1980(H)×710(W)×400(D) mm
Gross Weight	70kg/pcs
Power Supply	AC187V~242V, 50/60Hz
Power Consumption	<15W
Working Frequency	Adjust according to the installation environment
Operation Temperature	-10 °C ~ 40 °C
Operation Humidity	0 ~ 95% (No freeze)
Detection Defense Zone	12 Zones Standard (18 zones optional)
Output Connection	PC connection (optional)
	Turnstile gate connection (optional)

DETECTION RANGE ▶

Zone Alarm Indication

When a plurality of metals in different positions of the human body pass through the security gate, the alarm is raised simultaneously and the position of the plurality of metals can be indicated.

Passenger and Alarming Numbers

Led panel displays visitors' numbers and the alarming numbers.

Detection Area Display

Led indicators on side of panels are to accurately display where the prohibited goods are.

Metal Items Alarm

Ultra-high detection sensitivity, excluding the influence of belt buckles, leather shoes and bras, It could detect precious metals such as copper, aluminum and zinc above 150 grams, or controlled knives and guns

Metal Weapons Alarm

Able to fast detect contraband weapons and accurately distinguish ferromagnetic and non-ferromagnetic metal objects.

PRODUCTS HIGHLIGHTS

Infrared Detector Passenger Number

Infrared metal detector:

Can detect half the size of paper clip of metal

Passenger number:

Bilateral infrared, can accurately detect the number of people.

The second led panel shows the alarming number.

Modular Component Design

Convenient transportation and maintenance.

12 Detection Areas

12 independent detection areas, each area 1000 degree sensitivity adjustment, accurate display of metal position

Low Temperature Compensation Function

With low temperature weather compensation function, up and down adjustment of 2°C, low temperature below zero can work normally

Startup Self-diagnosis Function

Self-check the system and display the test results.

Ultra Low Sounding Altitude

Any metal object more than 2CM above the ground entering the detection area can alarm

Original Flight Alarm Function

Throwing a metal object through the middle of a door also gives an accurate warning.

Network Output Interface

Network output interface can be customized to provide gateway, face recognition, ID card reading information output and secondary development

APPLICATIONS

- ✓ Prisons
- ✓ Courts
- ✓ Airports
- ✓ Electronics Companies
- ✓ Exhibition Halls

- ✓ Schools
- ✓ Hospitals
- ✓ Convention Centre
- ✓ Amusement Parks
- ✓ Major Celebrations

We don't only provide products, we offer full range access control solution

01

****Turnstile gate and metal detector integrated by wiring***

Personnel pass through the detector, detect the knife, gun and other metal objects.
If detection passed, turnstile will automatically open and people will pass.
If detection rejected, the detector alarms and turnstile remains closed.

02

****Turnstile gate and metal detector used separately***

Step 1, Personnel pass through the detector, detect the knife, gun and other metal objects.
Step 2, Personnel who passed the detector via the turnstile to verify the identity (Rfid card, fingerprint, face, password, QR code...).

If verification passed, turnstile opens.
If verification failed, turnstile remains closed.
